

■ PU-Fix

1/1

Cartridge - 310ml

PU-Fix is een very high-quality and strong polyurethane foam glue. The product is universal and is extremely easy to use. PU-Fix is completely solvent-free and can be used for an extremely wide range of applications.

PU-Fix is specially developed for gluing wood, polystyrene and polyurethane foam, glass fibre, cork, Formica, concrete, stone, marble and metals to porous surfaces. The product can even be used on slightly damp surfaces, which will even enhance curing because PU-Fix cures under the influence of air humidity.

PU-Fix cures extremely quickly, and begins to form a skin after only 5 minutes, eventually hardening after 30 minutes. In addition to its extremely fast curing the product has a very wide temperature range of -30°C to +100°C.

PU-Fix starts to foam in contact with air humidity. This creates optimal anchoring to the surface. Another advantage with the foam formation is that it helps fill in the cracks. PU-Fix is a paste, which makes it perfect for use on horizontal and vertical surfaces. Under these often difficult conditions the product will provide a fast and durable bond nonetheless.

The handy 310 ml cartridges make PU-Fix very economical and easy to use.

Properties:

- Completely solvent-free.
- Can be applied universally.
- Very fast drying.
- Can even be used on slightly damp surfaces.
- Can be applied on one side.
- Provides a watertight bond.
- Temperature range of -30°C to +100°C.
