## Aerosol - 500ml

Repaplast Colour Finish Better Care is a modern, professional plastic lacquer. The product is available in the most common original OEM colours. This means that the product is extremely well suited to restoring weathered plastic parts to their original state with a minimum of effort.

In addition, it is the ultimate plastic layer to finish off repairs using the Repaplast Scratch Repair System.

Repaplast Colour Finish Better Care is made from alkyd resin and is therefore water and UV resistant, durable and flexible, and it offers excellent adhesion to plastic without using a primer.

These days, plastics are used on a large scale in vehicles. So not only are bumpers, mirrors, mudguards and fenders made of un-lacquered, textured plastic, but so are just about all of the interior parts.

This plastic offers lots of positives: it is lightweight, relatively inexpensive and easy to shape and process. But it does have its negatives too. Most are not particularly UV resistant, and so over time the softening agents migrate from the plastic. This makes the material more brittle and the top layer takes on a weathered look. Plastic is also very vulnerable to damage such as scratches and scrapes. With Repaplast Colour Finish Better Care all of this minor damage can be perfectly repaired with a minimum of effort, and weathered plastic can be made to look like new.

Due to its aerosol packaging Repaplast Colour Finish Better Care is very user-friendly and easy to use. The special flat fan spray valve gives the aerosol can a spray pattern comparable with that of a spray gun. This ensures a perfect end result.

Properties:

- Aromatic-free.
- Permanently flexible.
- Very impact resistant.
- Colour fast and UV resistant.
- Good petrol resistance.
- Excellent adhesion
- Easily sprayable, even in several layers.
- Fast drying.
