

Bluewater Boats

The Boathouse, Stuckton Iron Works, Fordingbridge, Hampshire 07710 149003

Dear Melanie,

We look forward to your visit this Friday and will be able to show you the progress on our latest project. The Adaseal is proving its worth in several applications, not only have we used it in the hull/deck bonding, which has always been a crucial structural joint between the steel topsides and the timber decking, but have found it ideal for seating deck fittings and all the through-hulls. Only one complaint, the coach roof had to be removed and altered, it was easy getting the screws out but the Adaseal would not let go and the joint had to be sliced open with a sharp knife!

Please remember to bring along some of your windscreen stuff for our deck skylight, which is now in place and ready to be glazed.

Many Thanks

Hayden
