The new generation of repair and maintenance possibilities

Innotec launched two new products at the Spatex show.

Easy Gasket, pure synthetic rubber in a pressure tube. Easy Gasket will make a perfect replacement gasket for water pumps, heater units, sealing water hoses plus many, many other uses. It's easy and clean to use and means that you only have to visit the job once and don't have to wait for replacement gaskets or o rings to be delivered.

Repaplast, plastic repair system. A fast and professional way of repairing pump housings, filters, plastic pipes, grilles, in fact anything that's made of plastic.

Adheseal the underwater sealer is ideal for maintenance, construction or repairs, it doesn't contain any solvents so won't float off while your working with it. Adheseal has incredible bonding properties (30kg cm) and will stick just about anything!
